I. Amendments to the Claims.

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of claims:

Claim 1 (Currently Amended) A communication terminal comprising:

a display unit which displays an original selection screen for selecting at least one of a plurality of upper layer options displayed on said original selection screen;

display control structure means which causes a display of the plurality of upper layer options displayed on said display unit, by one of (i) division and (ii) scroll; and

a plurality of hardware keys at least one each of which is operated to select a corresponding one of a the plurality of upper layer options not currently displayed on said original selection screen display unit;

said display control structure (i) means causing, when an upper layer option not currently displayed on said original selection screen has been selected, a display of a further screen, including a plurality of lower layer options associated with the said selected upper layer option, on said display unit, and (ii) causing, when next displaying said original selection screen by operating one of said plurality of hardware keys, a display of a screen that includes an indication of the selected upper layer option.

Claim 2 (Currently Amended) A communication terminal comprising

a display unit ~~(14)~~ which displays an original selection screen for selecting at least one of a plurality of options;

display control means ~~(+)~~ which causes display of options in said unit ~~by~~
~~division~~; and

a key for selecting an option not currently displayed on said display unit from the
plurality of options;

said display control means causing, when an option not currently displayed has
been selected, display of a screen associated with said selected option on said display unit and
causing display of said selected option in reverse when displaying said original selection screen
next by operating another hardware ~~said~~ key.

Claim 3. (New) A communication terminal according to Claim 2, wherein said
display control means comprises display control structure.

Claim 4. (New) A communication terminal according to Claim 3, wherein said
display control structure causes a display of the selected option by division.

Claim 5. (New) A communication terminal according to Claim 3, wherein said
display control structure causes a display of the selected option by scroll.

Claim 6. (New) A communication terminal according to Claim 3, wherein said
display control structure causes a display of a selected option word in reverse.

Claim 7. (New) A communication terminal according to Claim 3, wherein said
display control structure causes, in response to activation of a clear key after the display of the

screen associated with the selected option, a display of an original selection screen that includes the selected option in reverse.

Claim 8. (New) A communication terminal according to Claim 3, wherein said display control structure, in response to a hardware key selecting an upper layer option not currently displayed on said original selection screen, causes an immediate display of a plurality of lower layer options corresponding to the selected upper layer option.

Claim 9. (New) A communication terminal according to Claim 3, wherein said key for selecting an option not currently displayed comprises an alphanumeric key.

Claim 10. (New) A communication terminal according to Claim 3, wherein said display control structure causes said original display screen to display less than seven options, and wherein said display control structure causes, in response to activation of the 7 key while said original selection screen is displayed, display on said display unit of a plurality of information associated with a seventh option not displayed on the original selection screen.

Claim 11. (New) A communication terminal according to Claim 10, wherein said display control structure causes, in response to activation of the 7 key while said original selection screen displays a plurality of upper layer options, display on said display unit of a plurality of lower layer options associated with a seventh option.

Claim 12. (New) A communication terminal according to Claim 10, wherein said display control structure causes, in response to selection of a clear key while said display unit displays the plurality of information associated with a seventh option, display of an original selection screen including the seventh option.

Claim 13. (New) A communication terminal according to Claim 1, wherein said display control structure causes, in response to activation of a clear key after the display of the screen associated with the selected option, a display of an original selection screen that includes an indication of the selected option.

Claim 14. (New) A cellular telephone, comprising:

telecommunications structure configured to carry out cellular telecommunications;

display structure configured to display upper and lower layers of options;

a keypad configured to select options from among the upper and lower layers of options;

display control structure configured to: (i) cause display on said display structure of plural upper layer options, (ii) in response to activation of a single alphanumeric key of said key pad, select an upper layer option not displayed on said display structure, and (iii) in response to said activation of said single alphanumeric key, cause immediate display of plural lower layer options corresponding to the selected upper layer option.

Claim 15. (New) A cellular telephone according to Claim 14, wherein said display control structure is configured to display at least a portion of said lower layer options as a highlighted display.

Claim 16. (New) A cellular telephone according to Claim 14, wherein said display control structure is configured to, in response to activation of a clear key while said display unit is displaying said plural lower layer options corresponding to the selected upper layer option, cause display of plural upper layer options including the selected option.

Claim 17. (New) A cellular telephone according to Claim 16, wherein said display control structure is configured to, in response to the activation of the clear key while said display unit is displaying said plural lower layer options corresponding to the selected upper layer option, cause display of the selected upper layer option highlighted.

Claim 18. (New) A cellular telephone according to Claim 16, wherein said display control structure is configured to, in response to the activation of the clear key while said display unit is displaying said plural lower layer options corresponding to the selected upper layer option, cause display of the selected upper layer option reversed.

Claim 19 (New) A cellular telephone according to Claim 14, wherein said display control structure is configured to (i) cause display of four options of the upper layer of options, (ii) cause display of a seventh option, of the upper layer of options, which is not currently displayed on said display structure, in response to activation of the 7 key, and (iii) in

response to said activation of said 7 key, cause display of plural lower layer options of the seventh upper layer option.

Claim 20. (New) A cellular telephone, comprising:
telecommunications structure configured to carry out cellular telecommunications;
display structure configured to display plural options;
display control structure configured to (i) display on said display structure less than seven options of an upper layer of options that includes at least seven options, (ii) in response to activation of a hardware key, display on said display structure a seventh option of said upper layer of options, (iii) in response to selection of the seventh upper layer option with another hardware key, display on said display structure a plurality of lower layer options associated with the seventh upper layer option, and (iv) in response to activation of a further hardware key, display on said display structure a plurality of upper layer options including the seventh option, wherein the displayed seventh upper layer option is displayed as a highlighted option.

Claim 21 (New) A cellular telephone, comprising:
telecommunications structure configured to carry out cellular telecommunications;
display structure configured to display plural options;
display control structure configured to (i) display on said display structure less than a predetermined number of upper layer options, where said upper layer of options includes

at least the predetermined number of options, (ii) in response to selection by a hardware key, display on said display structure a selected upper layer option that is not currently displayed on said display structure, (iii) in response to activation of the selected upper layer option with another hardware key, display on said display structure a plurality of lower layer options associated with the selected upper layer option, and (iv) in response to activation of a further hardware key, display on said display structure a plurality of upper layer options including the selected option, wherein the displayed selected upper layer option is displayed as a highlighted option.

Claim 22. (New) A cellular telephone, comprising:

a display unit which displays an original selection screen for selecting at least one of a plurality of upper layer options displayed on said original selection screen;

display control structure which causes a display of the upper layer options on said display unit, by scroll; and

a key for selecting an upper layer option not currently displayed on the original selection screen;

said display control structure (i) causing, when an upper layer option not currently displayed on said original selection screen has been selected, a display of a lower level option screen, which is associated with the selected upper layer option, on said display unit, and (ii) causing a display of the selected upper layer option in reverse when displaying said original selection screen thereafter.
